INDUSTRY OVERVIEW

Mining is unforgiving work—rough roads, remote sites, and tight maintenance windows put constant pressure on your people and equipment. Elliott HiReach and BoomTruck units are built for this reality, combining heavy-duty construction, long reach, and high-capacity platforms and material handling so you can lift people, tools, and components with fewer machines, fewer setups, and more uptime.

- Built for Brutal Conditions – Heavy-duty structures and components are designed for rough mine roads, high-duty cycles, and long service life.
- More Work per Setup – Long reach and high-capacity platforms let crews access more work areas and handle people + materials with a single machine.
- Tools and Power at Height – *Office in the Sky* options bring power, air, and welding to the platform, cutting trips and speeding repairs.
- Focused on Uptime – Strong dealer support and a leading structural warranty help control total cost of ownership and keep units in the field.

FEATURE

BENEFIT FOR MINING WORK

Heavy-duty subframe, turret, and bearing

Excellent stability on rough mine roads and benches with long service life in high-duty cycles.

Long side reach & tall working heights

Access conveyors, highwalls, and overhead services from fewer setups to reduce repositioning.

Material handling on the boom and in the platform

Lift personnel, tools, and heavy components with one machine—no need for separate crane and manlift.

Off-road long-stroke outriggers

Stable setup on uneven, loose, or rocky ground with less cribbing and faster deployment.

Severe-duty packages for extreme environments

Reliable performance in dust, moisture, and temperature extremes, keeping units on the job.

Lifetime structural warranty + Backed by expert dealer support

Lower total cost of ownership and confidence your equipment will stay in service for years.
