E-LINE
PLATFORM

STANDARD COMPONENTS

- Personnel capacity – 1,200 lb
- Material handling capacity – 1,500 lb (independently rotating)
- Combined capacity – 2,000 lb
- Telescopic Mode with Hydraulic Self-Leveling
- 165-degree rotation
- Platform size – 36 in. × 72 in.
- Dynasmooth Controls
- Elliott Speed Reduction at Full Extension
- ANSI A92.2 Compliant in All Modes
- Available of E145, E160 and E190 E-Line Aerials

FULL SPECS:

Self-Leveling, Rotating Platform

The hydraulic self-leveling platform with 165° rotation keeps operators safe, stable, and positioned exactly where they need to be—even in challenging conditions.

Heavy-Duty Personnel & Combined Capacity

With a 1,200 lb personnel capacity and a total combined capacity of 2,000 lb, the basket supports both crews and equipment, ensuring maximum productivity in a single lift.

Stays On Between Jobs for Faster Setup

Designed for flexibility, the E-Line Basket is roadable with a front frame extension, simplifying transport between job sites.

Integrated Material Handling

An independently rotating material handler with up to 1,500 lb capacity allows crews to lift and position materials with precision, reducing the need for extra equipment and improving efficiency on the job site.

Innovative Features & Technology

The platform is built around a software-defined control system with integrated safety architecture. Motion and machine response are managed through software and high-precision proportional valves, rather than relying only on hydraulic behavior and mechanical limits.

Available on E145, E160, and E190
